Introducing Cloud Video Surveillance

SIMPLE

Extraco Technology's Cloud VS is a direct camera-to-cloud solution that eliminates the need for on-premise recording hardware or bridges.

Cameras can be connected to the local network for a quick installation and immediate recording.

SCALABLE

This cost-effective solution for small and large businesses, including multi-site installations can support an unlimited camera count.

You will only need to pay for the storage you need and can add cameras and increase storage as needed.

SECURE

All data is captured and curated in a T4 level data center with the latest encryption, redundancy and backup infrastructure.

Firmware updates and cybersecurity patches are automatically applied.
